

## **STUDY LEVEL INDICATING SYSTEM [SLIS]**

**S. Ilankeswaran**

Postgraduate Institute of Science, University of Peradeniya, Peradeniya, Sri Lanka

This project is an analysis based on the marks in continuous assessment or assignment. The Name "SLIS" is the acronyms of Study Level Indicating System. The SLIS system interacts with students in various levels of studies such as pre education, primary education, secondary education, senior secondary education, non-formal education, highest level education and any university education. This SLIS system consists of a series of computer programs that interpret and give results of statistical analysis of given marks of students. User interfaces are designed in graphical formats. This user interfaces are specially designed to use very easily by anyone of any age groups with the natural English alphabets. The analyzed results were shown in decimal number systems with the international standard symbols of arithmetical and statistical operators.

SLIS system generates sensitive evaluation data of student in multi levels of ranks and z-scores. Here, level is meant by Class level, School level, Zonal level, District level and the Provincial level. In addition, any other institutes can use this SLIS system for their own structure of courses separately.

The original inspiration for this project, concentrate healthy in studies, increases the achievements of knowledge, skill, attitude, and practice, and further protects the failure of studies after some defined period or end of their studies. This will develop their confident of prediction made a decade ago.
